Ref: System Four Field Report for the Period of August, September, Oct.

25X1A

The enclosed memo from [REDACTED] indicates some of the results we have obtained on Systems noise studies. A complete vehicle noise study will be made at E.A.F.B. using System 4, No. 107. Any results we obtain will be passed on.

Regarding your suggested method of stopping the recorder at the end of the tape run, this is very feasible. At present we are doing some other work on the recorder and, if possible, will try to work out something along this line at the same time.
